

Introducing...

# OmniPortal

POWERED BY OMNI

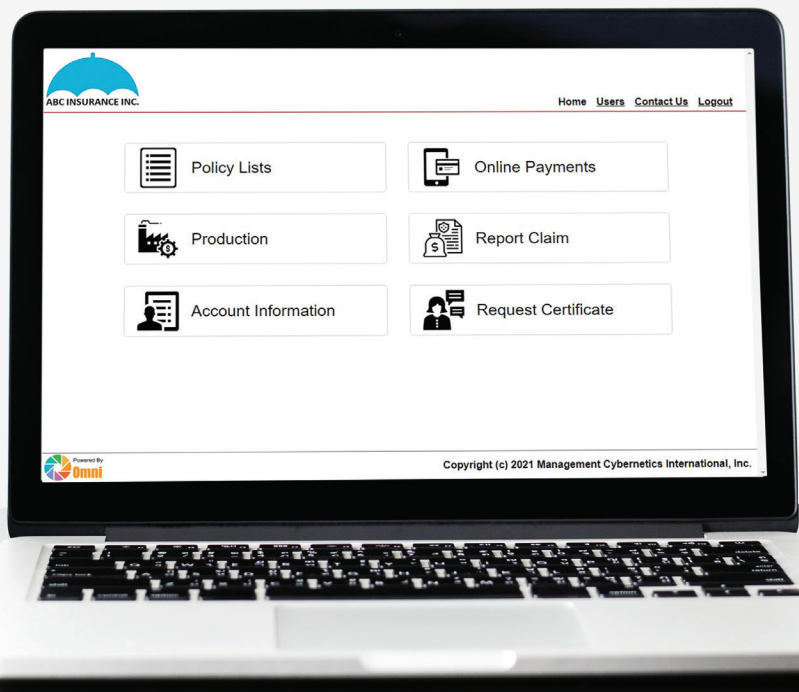

WSIA  
MEMBER

Omni data becomes available on the web  
as part of the new OmniPortal product.

Your agents can access real-time production reports, view policy information and statistics, review statements, make online payments, and much more!

Insurance automation  
has come full circle.

***This web-based application grants your agents access to features that would typically be daily, time-consuming requests of your staff.***

Agents can access production reports, request certificates, report claims, retrieve monthly statements, review A/R status, make online payments, and more, all from your secure website.

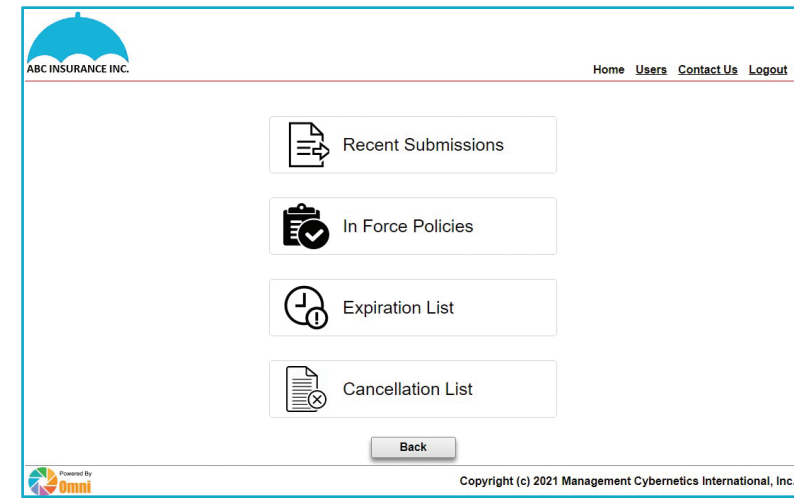

***Beyond the easily accessible functionality, security is at the core of the portal.***

Your MGA administrator can grant access to select agents or your entire client base and can manage the permissions at the agency level to provide or limit access to specific functions. The administrative user for each agency will then determine the permissions or restrictions within their own agency user group.

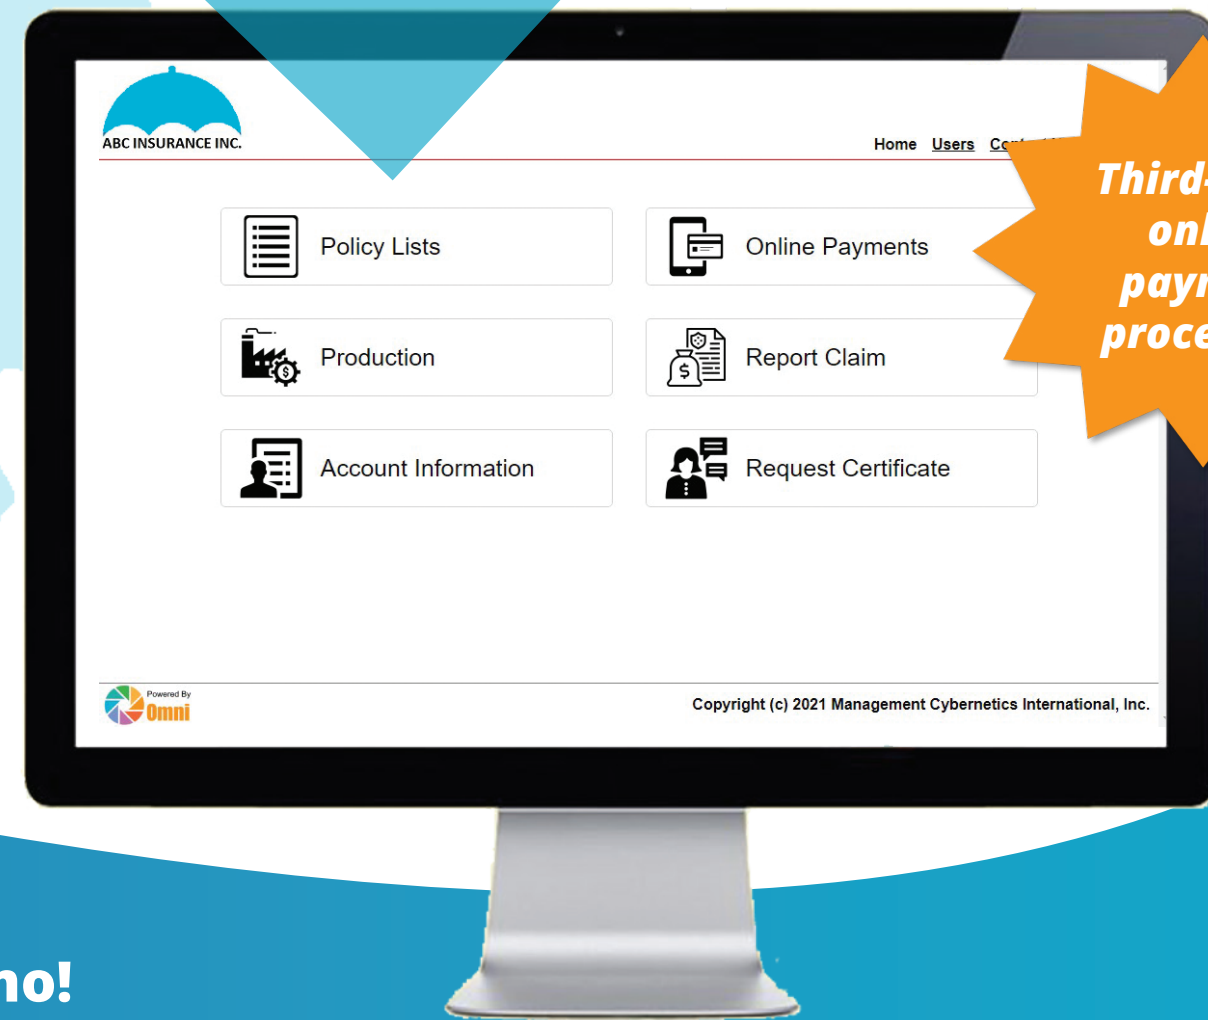

Note: OmniPortal is only compatible with an Omni8 installation.

***OmniPortal provides a single sign-on for your agents to access a variety of functions, standard as well as customized.***

Many standard options are included with OmniPortal, but the application can also be customized so that your agents only have to sign into one website to perform multiple functions. The portal can link to your rater(s) (Omni-built or 3rd party), access policy data from companies, provide the ability to complete and submit online applications, and much more.

Insurance automation has come full circle.

***Third-party  
online  
payment  
processing***
